Send feedback

The Translation API's recognition engine supports a wide variety of languages for the Neural Machine Translation (NMT) model.

These languages are specified within a recognition request using language code parameters as noted on this page. Most language code parameters conform to ISO-639-1 identifiers, except where noted.

Translations from any language to any language in this list are supported. The list is updated as new languages are added. You can also list the supported languages by using Cloud Translation - Basic or Cloud Translation - Advanced APIs.

Try it for yourself

If you're new to Google Cloud, create an account to evaluate how Cloud Translation performs in real-world scenarios. New customers also get \$300 in free credits to run, test, and deploy workloads.

Language	ISO-639-1 Code
